**Available Study Materials**

This Large Format Printing Technical Professional exam is one of the electives available to be certified as an Accredited Presales Consultant (APC). It is also one of the required exams to earn the APC – Specialty – Color Professional Workflow credential.

The APC designation with the Large Format Printing specialization provides certification that an individual has the skills, given a set of customer business requirements, to recognize opportunities, make recommendations, install or configure a large format printing solution. This course uses lecture as well as hands-on labs covering HP’s Designjet products, its associated writing technologies, media capabilities and printer driver features. This is not a repair course.
