Important

This kit provides the latest Service Release for HP ProLiant Storage servers. Please read the enclosed Quick Start Guide for a complete description of the Service Release and its installation instructions.

In addition to the Service Release, the DVD contains other software upgrades and enhancements that were not available when your storage server was manufactured. The enclosed DVD includes:

- Latest Service Release
- Microsoft® Windows® Multilingual User Interface (MUI) Pack
- Documentation
- Links to HP Support and Drivers
- Adobe® Acrobat® Reader

The Storage Server desktop can be accessed via a directly connected keyboard, mouse, and monitor, through Remote Desktop, or by using an Integrated Lights-Out port.

If the DVD does not automatically start, navigate to the drive where the DVD is located and double-click setup.exe.

⚠️ **Caution:** Make sure there are no other applications running during the installation of Service Release DVD. Also, ensure that installation is completed without any interruptions. Some of the hotfixes will not be installed if there are other applications running during the install process (including Windows Explorer or Internet Explorer or Task Manager).
